

Code quality metrics for engineering managers

Brian York

CEO

415-608-7737

brian@bliss.ai

proprietary & confidential

Bliss consolidates productivity and code quality metrics from source control, static analysis and issue tracking to help engineering managers make informed decisions.

By analyzing every line of code, the metric differences are per commit. We map these changes to developer/team and issues/features.

PRODUCTIVITY

There's no one-size-fits-all metric and output is fragmented across different tools.

VISIBILITY

Limited visibility into development for non-technical team members.

QUALITY

Inconsistent reporting of code quality across divisions within an organization.

+22,348

Lines of Good Code

+8% from previous **year**

Well done, your lines of code are being tracked and are coming along nicely. More importantly, this is an active code base. This helps ensure against any potential code rot and the bugs that can surface over time.

+8,356

Lines of Technical Debt

+3% from previous **year**

Don't aim to be perfect, some technical debt is normal. Perfect is great but can cost productivity.

Easy to understand dashboard view for engineering managers. Configurable based on company's quality goals.

We've built a scalable system for running parallel code reviews. Allowing hundreds of analysis to be run in minutes.

- January
Initial concept. 50+ customer development meetings
- February
Wireframed, designed, developed and launched Feb 27th

2015

TRACTION ●
as of today

70 paying customers

\$84,000 annual revenue run rate

90% margins

Over 10,000 repositories reviewed

Over 1 billion lines of code reviewed

Our initial focus was on startups for faster sales cycles and more homogeneous stacks.

*exclusively focused on startups from March 2015 through June 2015

Roger Graves
Co-founder/CTO of Cloverpop
backed by True Ventures

“Bliss is my wing-man when explaining what technical debt is and why it’s important to spend resources reducing it.”

Noah Abelson
Co-founder/CEO of ShareRoot
backed by 500 Startups

“Having visibility into my code has helped me be a better CEO and have impactful conversations with my development team .”

Configurable static analysis deployed behind firewall.
Output sent to cloud for proprietary dashboarding blended with data from tools like JIRA, GitHub enterprise and CI services.

Configurable

Installable in private cloud or data center

Roll-up reporting

Enterprise Customers

David Koehn

Oracle executive

- 1 Software eating the world, but engineering talent not at the same pace.

- 2 Huge shift to remote working.

“...in 2014, 3.2 million Americans worked remote.”
The New York Times

“...by 2020, 40% of the U.S. workforce will be independent workers.”
